

Carriers are designed to mount on large optical rails (OBA-L/LH) or large low-profile optical rails (OBT-LH). They freely slide on the rails and can be locked in place.

- The CAA-80LF is designed to be attached to the bottom of a large optical rail for direct clamping to an optical vibration isolator or laboratory bench.
- The CAA-100LC is designed to assemble large optical rails at right angles to each other.

Guide

- Friction-reducing tape is applied to the carrier surfaces that will be in contact with optical rails. Use as-is without removing the tape.
